Legionella Compliance Kits

Legionella is the causative agent of Legionnaires disease, a potentially fatal form of pneumonia. In 2001 the Health and Safety Executive released guidelines for the control of legionella, known as the L8 guidelines. These guidelines suggested the parameters and frequency that these should be tested to minimise the risk of Legionella in the system.

The WTS Legionella Compliance Kit has been designed for these parameters and provides the basis of meeting the requirements of the legislation.
